By Asad Malghani This is by far the worst book I have ever used. The book spends most of the time discussing issues that are common sense such as "Taking a customer's Order" or "Bill the customer" In a chapter devoted to Sales and Collection Process in the AIS environment. Which might seem reasonable. But then asks questions like: In a systems flowchart, which of the following is most likely to be depicted with a predefined process symbol? a. Browse catalog b. Make bank deposit c. E-mail client d. None of the above. The book defines what a predefined process is in Chapter 6. But gave no examples of it. So I have to infer from the little tid bits as to what the correct answer might be. Here is another question from the same chapter. Which of the following internal controls should Bonnie implement in the first step of the sales/collection process? a. Data encryption b. Separation of duties c. Lockbox system d. Bank reconciliation Again no support for this question in the chapter. It talks about internal controls, but never mentions which one should be first, I sent a letter to the Author to explain his

questions. This is the response I got. Thanks for all your recent questions. The point of the high context multiple choice questions in 4e is for you to think critically. I encourage you to do that, as I am not an "automatic answering machine." Kindly refrain from contacting me with similar inquiries in the future; regardless, do not expect further communication from me on this matter. Dr. Bob Hurt, C.F.E. This author after having no dignity to respond to his questions, told me not to ask him questions about his book. 0 of 0 people found the following review helpful. I had to get this for school but the author ... By Bethany Patridge I had to get this for school but the author is interesting. He has a different writing style. Very conversational and the information is essential to my career. 0 of 0 people found the following review helpful. Four Stars By Customer the book met my expectations

Accounting Information Systems: Basic Concepts and Current Issues, Fourth Edition, by Robert Hurt provides a highly approachable, interdisciplinary presentation of the fundamental accounting topics and information technology of AIS. It is written in a manner intended to develop professional judgment and critical thinking skills so students are prepared to be successful and effectively communicate with accountants and general managers whether their careers take them into public accounting, the corporate world, governmental and not-for-profit accounting, or another practice.
