**A.J. Jacobs : The New Domestic Automakers in the United States and Canada: History, Impacts, and Prospects (Comparative International Development)** before purchasing it in order to gage whether or not it would be worth my time, and all praised The New Domestic Automakers in the United States and Canada: History, Impacts, and Prospects (Comparative International Development):

Over the past forty years, state/provincial and local governments in the United States and Canada have provided foreign automakers with approximately \$4.80 billion in incentives in order to lure light vehicles assembly plants to their areas. This has included tax abatements, infrastructure construction, land giveaways, job training programs, and other subsidies. As of early 2015, ten foreign vehicle makers operated 20 light vehicles in developed North America. Despite the fact that all ten of these automakers have pursued a similar pattern—first exporting vehicles into the United States and Canada before launching vehicle plants in developed North America—each has followed its own specific historical development path and has created its own unique growth trajectory. This book provides a unique historical and qualitative review of these ten vehicle makers, from their early beginnings to their export entry into the United States and/or Canada through early 2015. In addition, it chronicles the histories of more than a dozen former automakers and potential future foreign light motor vehicle assembly plants in the United States and Canada. This includes the first foreign automaker to build its cars in the United States, De Dion-Bouton of France in July 1900, the early 20th Century endeavors of Fiat, Mercedes, and Rolls Royce, and the present day hopes of Chinese and Indian automakers. In the process, the text also provides an assessment of the top competing states and sites for any future plants, the possible incentives packages governments may offer to attract such facilities, and an estimated incentive value for each automaker. Overall, the goal of this book is to expand the knowledge of policymakers at all tiers of government in the United States and Canada and to help them take a more holistic look at the pros and cons of attracting Automobile Manufacturing FDI. It is hoped that this will enable them to make more informed decisions when pursuing a new foreign motor vehicle assembly plant. Its findings should also prove informative to urban and regional planning, political science, sociology, economics, labor, and international development scholars and students in North America and worldwide.

This book presents an excellent study of the worthiness of government financial incentive packages for foreign automakers to locate new plants in North America in particular jurisdictions.... Detailed 2015 economic data is provided for each currently active foreign automaker plant in North America, including for some their total payroll, average wages, and impact on total employment, and for all the plant history, employment, production capacity, size of incentive package, if any, competitive situation, and expansion plans. Chinese and Indian automaker expansion plans are included. Lengthy evaluations of dozens of the top areas competing for the next major foreign investment, with rankings given, highlight the likely continued dominance of southern US states in 'winning' new auto plants and concerns for rising 'out-of-control' incentive packages. The book should be of great interest to public officials and executives in all industries. The bibliography and index are excellent.... Summing Up: Highly recommended. Graduate students and faculty. (CHOICE) Encyclopedic in the depth of its research and the detail of its coverage, A.J. Jacobs' book provides an incredibly important contribution to our understanding of the history and impact of the North American auto sector and the role of foreign manufacturers in its evolution. This is the first book that really provides a comprehensive, transnational, and fresh analysis of one of the most profound shifts in industrial development in North American and global history—the emergence of the New Domestic automakers on this continent. (Dimitry Anastakis, Trent University) About the Author A. J. Jacobs is associate professor in the Department of Sociology at East Carolina University.
