Mark Pelling : The Vulnerability of Cities: Natural Disasters and Social Resilience before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Vulnerability of Cities: Natural Disasters and Social Resilience:

1 of 3 people found the following review helpful. Good Textbook for the Lazy Professor By Francesca Vanderbilt This is a good textbook for an advanced undergraduate class or a graduate seminar--lots of helpful facts, plenty of information to stimulate in-class discussion.

When disaster strikes in cities the effects can be catastrophic compared to other environments. But what factors actually determine the vulnerability or resilience of cities? The *Vulnerability of Cities* fills a vital gap in disaster studies by examining the too-often overlooked impact of disasters on cities, the conditions leading to high losses from urban disasters and why some households and communities withstand disaster more effectively than others. Mark Pelling takes a fresh look at the literature on disasters and urbanization in light of recent catastrophes. He presents three detailed studies of cities in the global South, drawn from countries with contrasting political and developmental contexts: Bridgetown, Barbados - a liberal democracy; Georgetown, Guyana - a post socialist-state; and Santo Domingo, Dominican Republic - an authoritarian state in democratic transition. This book demonstrates that strengthening local capacity - through appropriate housing, disaster-preparedness, infrastructure and livelihoods - is crucial to improving civic resilience to disasters. Equally important are strong partnerships between local community-based organizations, external non-governmental and governmental organizations, public and private sectors and between city and national government. The author highlights and discusses these best practices for handling urban disasters. With rapid urbanization across the globe, this book is a must-read for professionals, policy-makers, students and researchers in disaster management, urban development and planning, transport planning, architecture, social studies and earth sciences.

'An ambitious book.' Open House International 'This thought-provoking book can be seen as a foundation stone for a new research agenda.' Journal of International Development 'Pelling has provided another compelling argument against the naturalness of natural disasters...a study that is both comprehensive in its review of theory, varied in its selection of case studies, and concise in their representation on the printed page..' The Geographical Journal 'A valuable addition to the natural hazard literature.' Geographical Association '...a welcome addition to the literature on urban disaster' Journal of Environmental Planning and Management May 2004 '...a readable and rewarding book that should prove as genuinely useful to those working in disaster preparedness as to academics' Journal of Environmental Planning and Management May 2004 About the Author Mark Pelling has worked as a Lecturer at the University of Guyana and as a Research Fellow at the University of Liverpool where he is currently a Lecturer in human Geography.
