**Timothy Moss, Simon Marvin : Urban Infrastructure in Transition: Networks, Buildings and Plans** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Urban Infrastructure in Transition: Networks, Buildings and Plans:

Achieving sustainable energy and resource use is vital if cities are to thrive or even function in the long term. Focusing on cities in the United Kingdom, Germany and Denmark, this book examines the mounting pressures for changes in the management style of utility services in Europe, pressures that stem from a wide range of sources such as

liberalization and privatization of markets, tighter environmental standards, new economic incentives, competing technologies and changing consumption patterns. The authors show how changes in the management of utility services can contribute to achieving greater sustainability in urban regions. Whilst more efficient technology has a part to play, truly significant improvements in quality of life will be delivered only when the flow of material and energy through cities is focused on the goal of sustainability in each local context.

"An empowering, just-in-time, practical guide for mobilized sustainability change agents." -- Bob Willard, author of *The Sustainability Advantage* and *The Next Sustainability Wave* "This book will make you think. Hard. And systemically." --About the AuthorSimon Guy is Reader in Urban Development and Director at the Centre for Urban Technology, University of Newcastle, United Kingdom. Simon Marvin is Professor and Co-Director at the Centre for Sustainable Urban and Regional Futures, University of Salford, United Kingdom. Timothy Moss is Research Associate at the Institute for Regional Development and Structural Planning, Germany.
